Practical-10

Secure Login/Logout with Sessions, Role-Based Access, Timeout, and Remember-Me Token

Theory

1. Are sessions started and destroyed securely?

Answer: Yes, sessions are started securely using session_start() and destroyed using session_destroy() during logout to prevent unauthorized access.

2. Is password_verify() used correctly?

Answer: password_verify() checks passwords securely against the stored password hash.

3. Is unauthorized dashboard access blocked?

Answer: Dashboard access is blocked for users who are not logged in.

4. Is session timeout implemented?

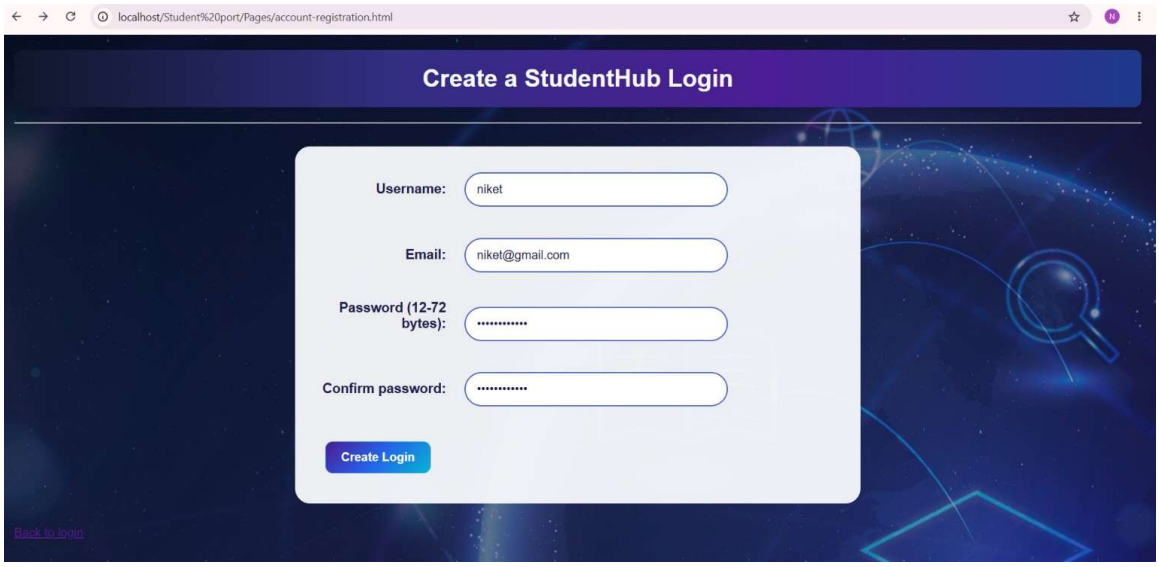

Answer :- Sessions expire after a specified period of inactivity.

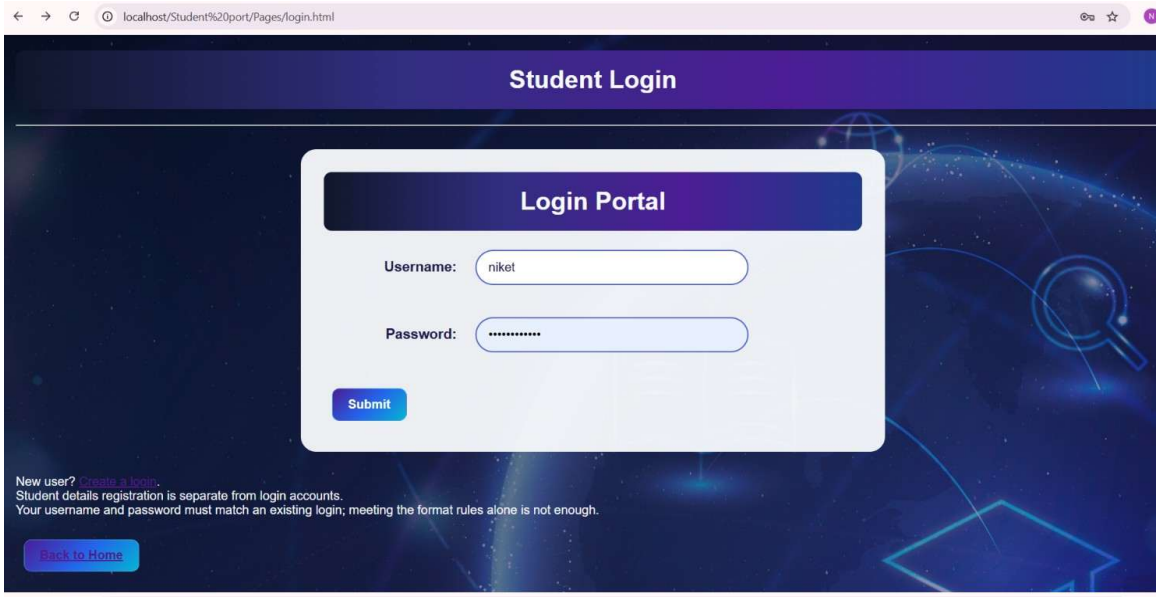

5. Are admin and student users redirected to appropriate dashboards?

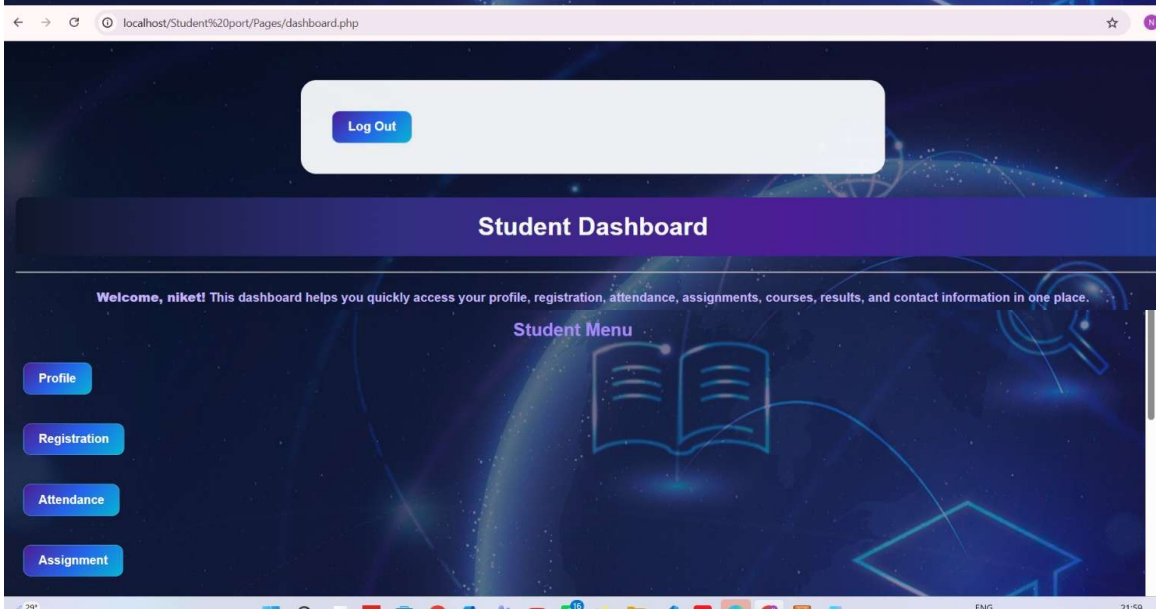

Answer:- Admin and student users are redirected to their respective dashboards based on their roles.

Submit
New user? Create a login.
Student details registration is separate from login accounts.
Your username and password must match an existing login; meeting the format rules alone is not enough.
Back to Home

Assignment

A. GitHub Repository Link:

https://github.com/Niket-Borad/StudentHub-Portal/tree/main/Practical%2010

B. Challenges Faced:

Implementing secure session management and logout.

Verifying passwords using password_verify().

Blocking unauthorized dashboard access.

Implementing session timeout and role-based redirection.

C.Learning Outcome:-

Implemented secure login and logout using PHP sessions, password verification, role-based access control, and session timeout.
