

Practical-5

Registration Form with Frontend Validation and User-Friendly Error Handling

Theory

1. Are correct input types and attributes used?

Answer: Yes, suitable types like email, password, and date are used to make input easier and more accurate..

2. Are validation errors displayed near the relevant fields?

Answer: Yes, errors are shown near the field so the user can easily understand what needs to be corrected.

3. Is password strength checked?

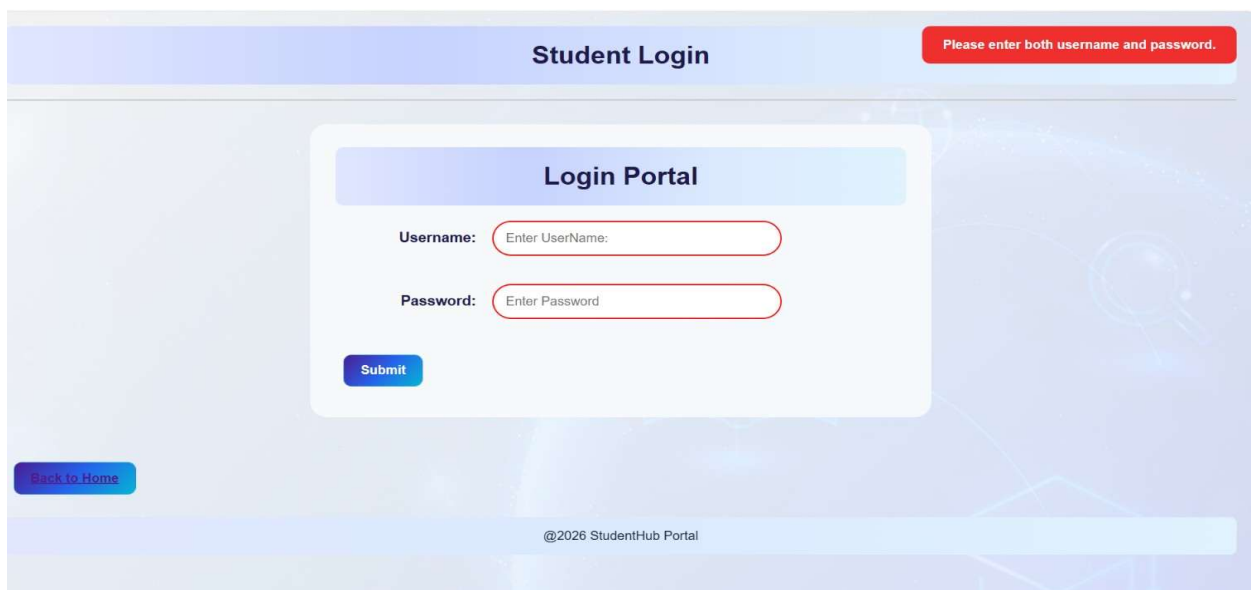

Answer: Yes, the password is checked using rules like uppercase, lowercase, number, and special character.

4. Is the form accessible using keyboard and screen-reader-friendly labels?

Answer: Yes, proper <label> tags are used, and the form can be operated using the keyboard and understood by screen readers.

Result:

Evidence of Work (Screenshots)

The screenshot displays a web application titled "Student Login". At the top right, a red notification bar states "Please enter both username and password.". The main content area features a "Login Portal" box with two input fields: "Username:" with a placeholder "Enter UserName:" and "Password:" with a placeholder "Enter Password". Below these fields is a blue "Submit" button. In the bottom left corner, there is a blue button labeled "Back to Home". The footer of the page includes the text "@2026 StudentHub Portal".

Student Login

Please enter both username and password.

A. GitHub Repository Link:

<https://github.com/Niket-Borad/StudentHub-Portal/tree/main/Practical%205>

B. Challenges Faced:

- Understanding how to select and modify HTML elements and how to apply java
- How to validate input using regex .
- How to connect Regex with field and html tage.
- How to Make Regex expression for diff-diff field value.

C.Learning Outcome:-

After This I'll know How to Use Regex For Form validation or Anything Which is We Want to Validate Using Only one Expression.How To Map Javascript With html.

Faculty Remarks:
